

## Wirraway Motorhome Levelling Systems

Wirraway Motorhomes have recently announced the availability of 2 Levelling Systems for their 260 series range of motorhomes. Both systems are electrically operated and offer: ease of levelling the motorhome on uneven ground, added stability in high winds or when changing tyres, and most importantly providing a level platform for efficient slideout operation when the slide out room is extended. Wirraway 260 SL Motorhome featured.

The **Stabi-Lite** 2 point electric stabilising system is manually operated, it's the cheaper system to install and includes lightweight jacks that attach to the motorhome's chassis rails between the front and rear axles, the system is controlled via an inboard switch panel and is an ideal choice in low cost levelling systems.

The **Level Tronic** is the benchmark motorhome levelling system. It provides the most stable platform available in any motorhome, and is Wirraway's premium option offering 4 point remote controlled manual or fully automatic levelling providing perfect level and efficient slideout operation when the slide out room is extended.

This heavy duty system is a robust and low maintenance system that can raise your motorhome clear of the ground to change a punctured tyre at the roadside by first chocking the other wheels then simply pressing the manual remote control to raise one wheel only!
